Case Studies & System Change

From Brown to Green

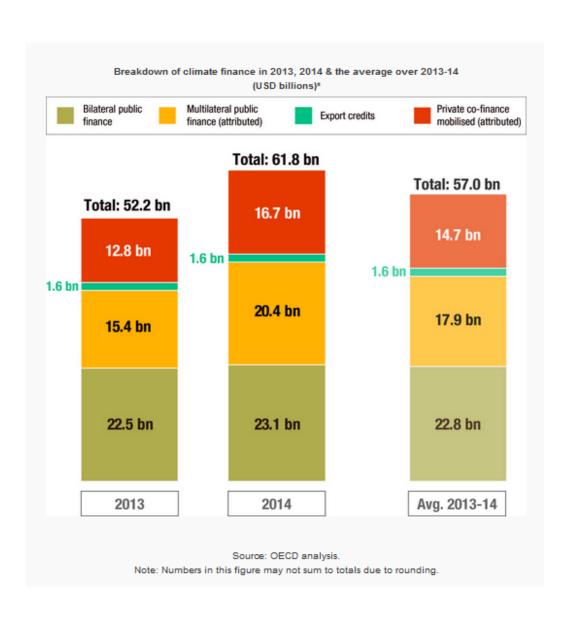

- Green and brown spreads narrow @ scale
- Need for public subsidy declines to politically tolerable levels
- Added capacity is mostly green in 2015
- Capital costs as key variable with zero marginal costs
- Within margins of system, but rising costs appear
- Uneven by sector, adaptation, stage of development
- From Plans to Deals
- From Deals to Systems

The McKinsey Cost Curve identifies 19 Gt of abatements by 2020 making it technically feasible to achieve 450ppm

McKinsey global GHG abatement cost curve, 2020* (up to costs of €60/t, excluding transaction costs, 4% discount rate)

Climate Finance 2013-2014

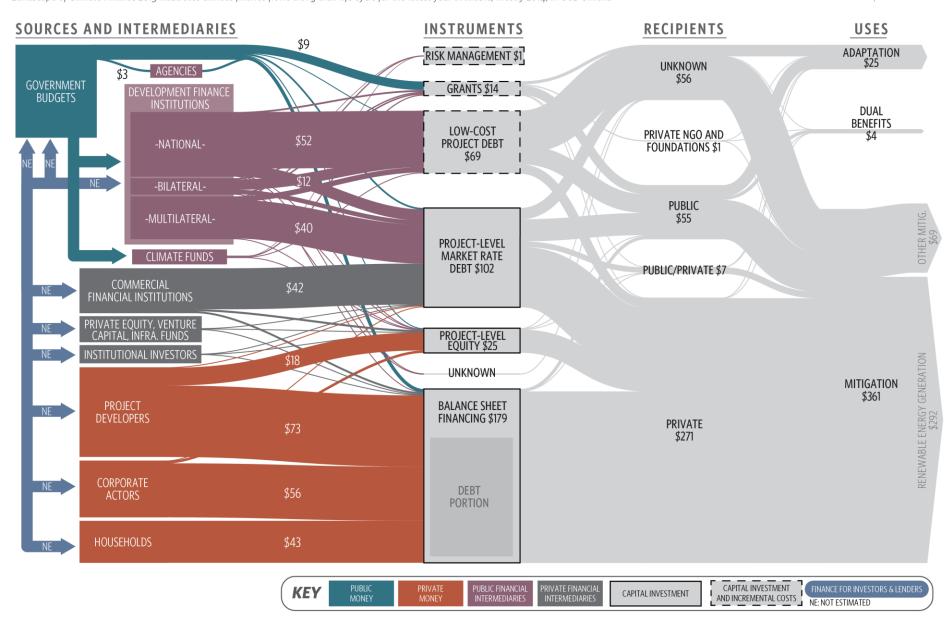

- From Brown to Green
- From Plans to Deals
 - Going the last kilometer
 - Public or private
 - -National or international
 - Efficient Public Spending
 - Over full portfolio of funding agents
- From Deals to Systems

GLOBAL LANDSCAPE OF CLIMATE FINANCE 2015 USD 391 HOTAL

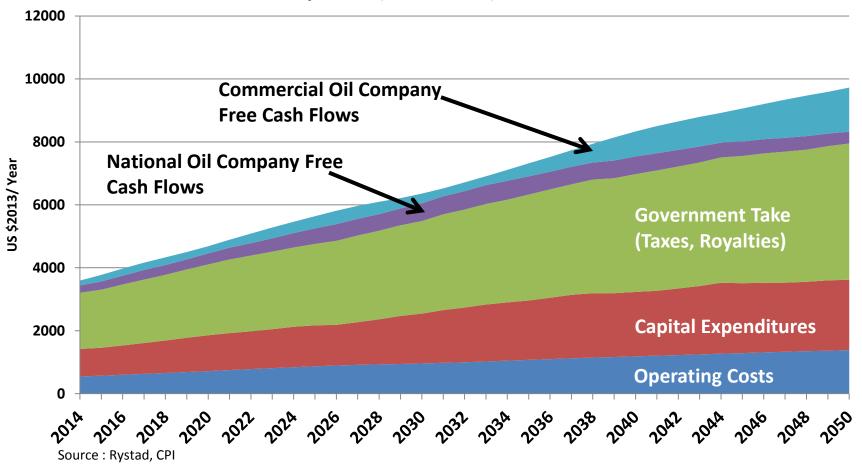

Landscape of Climate Finance 2015 illustrates climate finance flows along their life cycle for the latest year available, mostly 2014, in USD billions

Government budgets face the biggest potential change due to mitigation policies – Oil and Gas is a good example

Forecast Split of Oil and Gas Revenues between Costs, Government Take and Oil Companies (2014-2050) - Business As Usual Case

Governments and Government owned companies will receive close to 90% of the net present value of future oil production between now and 2050

POL. ECONOMY OF ENERGY & LAND USE

Micro-economics of generation

- 1. Green and brown spreads narrow @ scale
- 2. Need for public subsidy declines to politically tolerable levels
- 3. Added capacity is mostly green in 2015
- 4. Capital costs as key variable with zero marginal costs

NDC pledges & implementation plans principally renewable energy

- 1. Assessment
- 2. Targets/Commitments
- 3. Investment needs
- Last kilometer deal capacity and closure

Rationale and scale of public finance

- 1. Demand projections and methods
- 2. Infrastructure as public investment
- 3. Merit goods: quality and price set by policy
- 4. Market making on unfamiliar risks
- 5. Direct investment outside private business models

Investor mapping

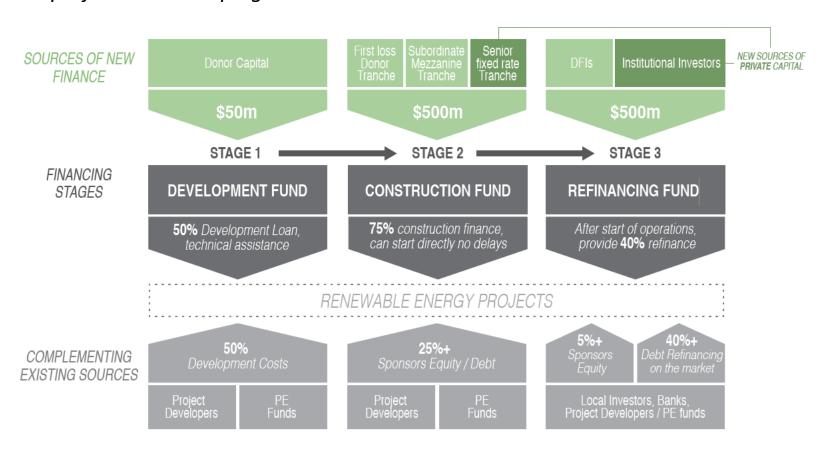

Institutional Investors are well positioned for renewable energy projects but illiquidity, project size constraints, and diversification requirements limit direct investment

Global Innovation Lab for Climate Finance: Climate Investor One

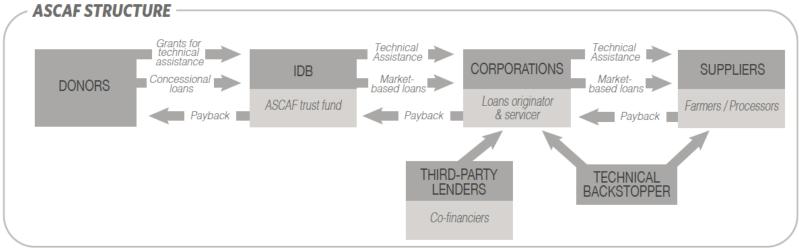

facilitate early-stage development, construction financing, and refinancing to fast-track RE projects in developing countries

Global Innovation Lab for Climate Finance: Agricultural Supply Chain Adaptation Facility

partner with agribusiness corporations to provide farmers with technical and financial support for climate-resilient investments through the corporations' supply chains.

- From Brown to Green
- From Plans to Deals
- From Deals to Systems
 - –Costs of blending
 - Transition to adapted systems
 - –Macroeconomic and growth:
 - Green and development costs

POL. ECONOMY OF ENERGY & LAND USE

Micro-economics

INDC implementation

Rationale and Scale of Public Finance

How are we managing climate risk and needs for public finance in low carbon infrastructure?

(From green to brown)

LANDSCAPE OF PUBLIC FINANCE

Macro-economics: monetary & fiscal context/policy

Renewed Growth: Investment Productivity

Industry Organization of Public Finance

Business Models of Public Finance

Performance quality & evaluation

Are there public budgets available for new infrastructure at scale and how are they used and invested?

INTEGRATING PUBLIC+ PRIVATE FINANCE

Aligning NDBs & DFIs

New Portfolios & Mandates

Innovative Instruments & Vehicles

Private Business Models; liquidity & geography

Performance of Instruments; costs of structuring (last mile)

How does public funding align with private finance? (From plans to deals)

SYSTEMS TRANSITION

Market Design

Financial Instruments & Platforms

Utility Business Models

Stranded Assets; SOE accounting & incentives

Coal power in system transitions

What is effective finance for transitions to more sustainable energy and land use systems?

(From deals to systems)

LANDSCAPE OF PUBLIC FINANCE

Macroeconomics

- 1. Debt deflation
- Empirics of gov't spending & capital budgeting
- 3. Sovereign debt costs
- 4. Effectiveness of Keynes tools
- 5. Unconventional tools & asset acquisitions
- 6. Macro-prudential regulation
- 7. Fiscal tools & constraints

Growth Economics

- 1. Supply of public investment (pol econ)
- 2. Special century & TFP (Gordon)
- 3. Secular stagnation
- 4. Structural change models
- 5. Knowledge & capital/resource productivity
- 6. Coordination between and within systems
- 7. Scale effects & R&D incentives

Industry Organization of Public Finance

- 1. Countries as principals
- 2. Fund of funds model
- Fiscal & shadow budgets → firms & households
- 4. Central Banks
- 5. Domestic
 Development
 Banks
- 6. Multilateral Banks and DFIs
- 7. ODA Agencies
- 8. Trust funds/SPVs
- 9. State Enterprises

Business Models& Public Finance

- Institutional missions and mandates
- 2. Corporate strategies
- 3. Sovereign & private lending internal arms
- 4. Instruments
- 5. Portfolios & risk management
- Scale & local
 Asset (fund)
- 7. Asset (fund) managers
- 8. Value chains in practice

Performance (impact)

- Comparative advantage
- 2. Economies of scale
- 3. Competition mechanisms
- 4. Diligence capacity & process
- 5. Indices and metrics (M&E)
- 6. Innovation
- 7. System paths or project only standards
- 8. Specialized regulators
